

ENVIRONMENTAL ENGINEERING

Regulatory compliance & resource optimization

Industry wrestles with tough environmental issues every day, working diligently to strike a balance between business success and protecting the environment.

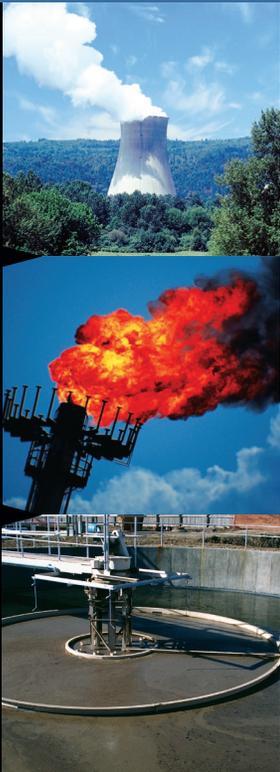

It's never been an easy task. Addressing these challenges—especially in today's ever-changing regulatory environment—often requires highly specialized knowledge and skills. The Environmental Engineering Division of Tri-Power Consulting is uniquely qualified to help you identify and manage the complex challenges of complying with environmental laws and regulations. We specialize in providing comprehensive strategies that enable your organization to maintain timely regulatory compliance while it maximizes the value of its environmental resources and the efficiency of its operational resources.

Our environment, health and safety services are built on a foundation of strengths and client successes in the following areas:

- Environmental consulting
- Regulatory compliance programs
- Licensing & air pollution control permitting
- Annual emission statement preparation
- SARA Title III planning & management
- Hazardous waste management documentation
- Site remediation management
- Spill control & prevention programs
- Technical documentation
- Construction management

Tri-Power's environmental solutions team has established a track record of success serving such companies as Conectiv Energy, Public Service Enterprise Group, GPU Generation (FirstEnergy), U.S. Steel, Sunoco, DuPont, Duke Energy, BP America and AK Steel.

We play an important two-dimensional role for clients. As an outsource consultant, we complement your internal compliance team, acting as an extension of staff by independently developing and managing environmental strategies based on the latest federal and state regulations, or by helping your staff implement internally-developed programs and activities.

Custom solutions that optimize resource efficiency

With our focus on creating client value, Tri-Power places strong emphasis on customized solutions that deliver important operating and strategic benefits, thus contributing to your organization's business success.

Following a requirements analysis, we track your company's operation, collecting, analyzing and synthesizing large amounts of environmental data and information on critical processes, areas and events. We then help you plan, integrate and implement high-impact strategies that keep the company in compliance with relevant regulations—and help you optimize the environmental resources your firm uses.

Through the close working relationships and long-term partnerships we establish, we also help clients maximize the efficiency of internal operating resources, including your database and information management systems.

Working with an enormous volume of information generated by environmental topics, issues and legislation, we help you leverage the data we collect by updating and streamlining your information and record-keeping so you can ensure that critical deadlines are met. Our work gives you information and statistical tools valuable in guiding compliance and adapting programs and strategies to any changing conditions or anomalies.

Our Environmental staff can work with you independently, or if help is required for projects outside our group's scope, we can work in tandem with the experienced engineers and computer professionals from other Tri-Power divisions.

By joining forces with these specialists and drawing on the strength of Tri-Power's broader, diversified capabilities, we are pushing back traditional boundaries and breaking new ground in environmental consulting.

The choice is yours

A Tri-Power client never endures the time-wasting process of working through a myriad of consulting staff to get answers or help. In environment, health and safety compliance, we give you the best of today's methodology and technology *combined with* highly personalized service.

We are best known for our ability to deliver high-value solutions to complex business problems and for our responsive—and responsible—environmental solutions team that keeps clients coming back for more.

The strength of a consulting company with such a powerful knowledge- and experience-based skillset and an unwavering commitment to highest quality client service makes Tri-Power the best choice for your organization.
