

INFORMATION MANAGEMENT

Solutions that enhance performance & productivity

Information is a natural resource in today's business world. With increasingly powerful and accessible technologies, companies can collect, generate and organize more information than ever before on everything they do.

However, information only becomes valuable if it's *managed effectively* and gets to the right people at the right time so they can make informed business decisions. Then it becomes a major strategic tool which can help an organization cut its cost of doing business, help employees work more productively, serve customers better, and improve its overall performance and results.

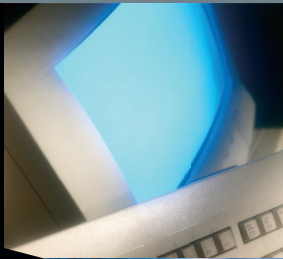

These are the benefits clients derive from doing business with the Information Management Division of Tri-Power Consulting. We design and build custom applications, software and programs that streamline and enhance information management systems, enabling clients to better manage mission-critical data collection, storage and tracking.

Working directly with project managers and technology professionals, we develop systems that take advantage of the latest technological advances to solve complex application problems and improve efficiency of the organization at the departmental and enterprise levels.

The solutions we develop are drawn from a diverse set of technologies, including:

- Microsoft .NET (VB.NET, ASP.NET, C#)
- Java (J2EE, JSP, EJB, JavaScript)
- Microsoft SQL Server
- Microsoft Access
- Oracle
- XML, XSLT, SAX, DTD, SOAP
- Crystal Reports
- HTML, DHTML, CSS
- Visual Basic for Applications (MS Access, Excel, Word, and Outlook)
- C, C++
- SAP Business Warehouse
- Windows 95/NT/2000/XP
- Unix

Assignments from such blue chip clients as Colgate-Palmolive, Public Service Enterprise Group, Energy Research Group, Americas Systems, Inc., Securities Training Corporation, Conectiv, Powercon and Maersk Sealand have taken us to the leading edge of application design and programming.

Our portfolio of work includes license and permit tracking systems, customer project and relationship management, inventory management, time and expense tracking and budget tracking. These innovative systems add client value by ensuring accurate, thorough and timely collection of the data necessary for regulatory compliance and workplace efficiency.

Technology solutions for business problems

Tri-Power views your information management challenges within the larger context of business operation. We know that the best solution is not just a function of technical knowledge, but also a reflection of how well we understand your overall business and our specific experience in developing applications like yours.

Our goal is to make your information management system as cost-efficient as it can be while performing at maximum potential—in short, making IM a strategic resource that produces high returns on your technology investment and protects that investment into the future.

Our developers, working closely with you from problem identification through solution implementation, build a custom system that meets your immediate requirements while integrating the flexibility that lets you later scale up simply, seamlessly and cost-effectively.

We can also create IM systems by customizing off-the-shelf desktop software, which delivers its original capabilities

as well as enhanced performance. We can even save clients development time and money by providing custom applications on a subscription basis which are backed by knowledge-driven support services.

All Tri-Power systems are competitively priced, developed in a timely way, created in partnership with you, custom-fit into your operations, fully tested and fully supported.

Our IM staff can work with you independently, or in conjunction with the skilled engineers and professionals from other Tri-Power divisions.

Quality, innovation & integrity set us apart

Uncompromising quality in the systems we design and the service we deliver are Tri-Power's highest priorities. As enterprise applications grow and change, we are at the forefront of developing the tools of intelligent information management.

Our innovative applications are powerful, easy-to-use and cost-effective building blocks that contribute to a client's business success by improving how an organization handles and manages mission-critical information.

These systems are backed by Tri-Power support professionals who view client satisfaction as a *personal* responsibility—one that begins before a sale and continues long after delivery and installation—so that you maximize the performance and productivity of your technology investments, now and in the future.
